

EDWARD J. CARTER

Data Platform Strategy & Modernization | Cloud & Distributed Systems | Engineering Leadership

(253) 548-5828 | edward.j.carter2@gmail.com | [LinkedIn](#)

EXECUTIVE SUMMARY

Data platform and engineering leader with a track record of architecting and modernizing enterprise-scale data systems across defense and commercial environments. Drives platform strategy, governance, and scalable architecture to enable reliable, real-time decision-making.

Expert in distributed data processing and cloud-aligned systems, with proven success improving performance, standardizing data practices, and accelerating delivery across teams. Known for aligning technical execution with business priorities and leading cross-functional initiatives.

Brings 20+ years of progressive leadership experience, combining strategic thinking, ownership, and operational discipline to deliver scalable data solutions that support mission-critical outcomes.

CORE LEADERSHIP & TECHNICAL COMPETENCIES

- Problem Solving
- Strategic Thinking
- Business-Driven Thinking
- Ownership & Accountability
- Decision-Making Under Pressure
- Real-Time Data Processing
- Data Platform Architecture
- Python & SQL Development
- Kubernetes & Containerization
- Data Modeling & Warehousing

PROFESSIONAL EXPERIENCE

SENIOR DATA ENGINEER, PLATFORM & DATA ENGINEERING *Dec 2023 to Present* Ennoble First (SAFFIRE / CHINOOK)

- Architected and advanced enterprise data platform capabilities supporting distributed processing at scale, enabling reliable, governed data access across engineering and analytics teams
- Established data engineering standards and governance frameworks for ingestion, transformation, and quality validation, improving system reliability and reducing downstream rework
- Led the design and evolution of medallion-based data architecture, standardizing data lifecycle management and enabling scalable, consistent data consumption across the organization
- Drove cross-functional alignment between engineering, operations, and business stakeholders by translating requirements into scalable data solutions supporting enterprise decision-making
- Enhanced developer experience and delivery velocity by implementing reusable data frameworks and modular transformation patterns across pipelines and teams
- Influenced platform modernization and architectural direction, contributing to scalable design patterns, performance optimization, and long-term data platform strategy

SOFTWARE ENGINEER / DATA ENGINEER *May 2021 to Dec 2023* Army Software Factory (Army Futures Command)

- Led the architecture and scaling of high-volume data pipelines processing 500M+ records, reducing processing time from 24 hours to 26 minutes and enabling near real-time, decision-critical data availability across the organization
- Delivered curated, enterprise-grade datasets into Army Vantage (Palantir-powered platform), improving data accessibility, operational visibility, and decision support across cross-functional teams
- Drove data platform modernization by integrating disparate data systems into unified, scalable architectures, enhancing system reliability, interoperability, and enterprise-wide data access

- Partnered with engineering, operations, and product stakeholders to align data platform capabilities with mission objectives, ensuring solutions supported both immediate execution and long-term strategic goals

DATA ENGINEER

Apr 2021 to Sep 2022

Texas ProTax

- Designed and implemented data integration workflows across disparate SQL and NoSQL systems, establishing scalable pipelines to support enterprise analytics and machine learning use cases
- Delivered high-quality, analysis-ready datasets aligned to data governance and modeling standards, enhancing data usability, accelerating model development, and improving downstream decision-making

DIGITAL INTELLIGENCE SYSTEMS MASTER GUNNER

Mar 2017 to Apr 2021

United States Army

- Led integration and modernization of enterprise intelligence data platforms (DCGS-A CD2, Palantir-powered), aligning data architecture with mission-critical decision systems
- Partnered with engineering, operations, and leadership to translate complex requirements into scalable data platform solutions
- Owned reliability, accuracy, and availability of mission-critical data systems, enabling consistent real-time decision support
- Drove adoption of data governance standards and structured data practices, improving consistency and platform effectiveness across teams

INTELLIGENCE ANALYST → DATA SCIENTIST → DATA ARCHITECT

Sep 2002 to Apr 2024

United States Army

- Progressed through increasingly senior roles, owning the end-to-end data lifecycle and aligning data capabilities with mission-critical decision-making
- Designed scalable data architectures and standardized analytical workflows, enabling consistent, repeatable decision-support at scale
- Developed and operationalized predictive models to improve forecasting and decision-making in complex, high-uncertainty environments
- Bridged analytics, engineering, and leadership teams, defining data requirements and shaping system architecture aligned to organizational goals

TECHNICAL & PLATFORM EXPERTISE

Databricks, Palantir (Army Vantage, DCGS-A), PySpark, Kafka, Kubernetes, AWS-aligned environments, ETL/ELT, Distributed Data Systems, PostgreSQL, NoSQL, Python, SQL

EDUCATION

- **M.S. Data Engineering**
Auburn University (Expected 2027)
- **B.S. Database Management / Data Analytics**
Western Governors University

Auburn, AL

Millcreek, UT
